### **DETAILED ACTION**

#### Election/Restrictions

Applicant's election (Paper No. 6), without traverse, of Group IV (claim 11) and compound 8 on page 21 as the Group and species, respectively, elected for prosecution is acknowledged. The examiner notes for the record that new claim 22 is drawn exclusively to the elected species and so will be included in Group IV. All other claims are withdrawn from consideration as being drawn to non-elected subject matter. The election/restriction is hereby made FINAL.

## Claim Objections

Claim 22 is objected to because of the following informalities: the claim lacks a period after the structure. Claims must begin with a capital letter and end with a period.

MPEP 608.01(m). Appropriate correction is required.

# Claim Rejections - 35 USC § 103

The elected species has been searched and is not deemed free of the prior art.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 1621

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 11 and 22, in so far as they read on the elected species, are rejected under 35 U.S.C. 103(a) as being unpatentable over *Arch. Immunol. Terapii*Doswiadezalnej (1961), 9(4), p. 609-29 (CAPLUS abstract).

The elected species is one of only two possible enantiomers of an old and well-known compound in the chemical arts: RN=94964-58-6. The cited reference explores the structure/activity relationship in the pheylisopropylamine group with respect to the central nervous system of mice. That is, the elected species is used in a biological setting.

It is well-established that the expectation with regard to enantiomers is that activities as they pertain to living systems are expected to be different. *In re Adamson*, 275 F.2d 952, 125 USPQ 233 (CCPA 1960). The fundamentals of optical activity and stereoisomerism are well known to persons of ordinary skill in the art. One of ordinary skill would have immediately envisioned the resolution of the racemic mixture and would have been motivated to do so with the reasonable expectation that the two resulting enantiomers would have substantially different pharmacological activity. This is an expected result and it is well established that expected beneficial results are evidence of

obviousness, just as unexpected beneficial results are evidence of unobviousness. *In re Skoll*, 523 F.2d 1392, 187 USPQ 481 (CCPA 1975); *In re Skoner*, 517 F.2d 947, 186 USPQ 80 (CCPA 1975); *In re Gershon*, 372 F.2d 535, 152 USPQ 602 (CCPA 1967).
